test_name: https://opensource-demo.orangehrmlive.com

status: FAIL

steps_executed: 7

steps_passed: 7

steps_failed: 1

total_steps: 8

error: Page.wait_for_selector: Timeout 10000ms exceeded.

Call log:

- waiting for locator("button:has-text('Cancel')") to be visible

failed_step: 8

failed_step_details: {'action': 'click', 'params': {'selector': "button:has-text('Cancel')"}, 'assertions': []}

execution_time: 0:00:34.876715

timestamp: 2026-02-21 11:44:10

debug_suggestion: 1. **Verify Selector Specificity:** The text "Cancel" might be case-sensitive or wrapped in extra whitespace. Try using a more robust locator like ``page.get_by_role("button", name="Cancel", exact=False)`` to handle variations.

2. **Check for Iframes or Shadow DOM:** Ensure the button isn't nested inside an `<iframe>` or a Shadow Root. If it is in an iframe, you must use ``frame_locator()`` to access it.

3. **Inspect UI State via Screenshot:** Capture a screenshot or use ``page.pause()`` immediately before the failure to confirm if the button is actually rendered, hidden behind an overlay (like a loading spinner), or if the preceding action (e.g., opening a modal) failed to trigger.

4. **Validate Element Visibility:** The element might exist in the DOM but be hidden (``display: none`` or ``visibility: hidden``). Check if a parent container is preventing the button from becoming "visible" as defined by Playwright's actionability checks.
